

New Cardiac Cath Lab Coming Soon to Community Hospital!

**During construction, a portion of the main hallway in the hospital will be
CLOSED for approximately one month.**

Community Hospital is excited to announce construction of a new Cardiac Cath Lab! The groundbreaking is **November 9, 2020**. We estimate opening the Cath Lab late spring/early summer 2021. The Cardiac Cath Lab will be located on the main level of the hospital, near the surgery waiting area. The Cath Lab will help support our new cardiology program, *Grand Valley Cardiology*. We look forward to having a new cardiology program at Community Hospital to better meet the cardiac care needs of patients in our community.

The Cardiac Cath Lab will help expand Community Hospital's ability to provide high quality health care to patients with medical conditions related to the heart who may have otherwise been transferred to another facility to receive cardiac care.

Some of the procedures we will provide in the Cardiac Cath Lab are:

- Cardiac catheter (ability to view and repair vessels of the heart)
- Heart attack prevention and treatment
- Pacemaker insertions
- Heart failure testing, diagnostics and treatment
- Expanded stress testing and cardiac follow-up
- Peripheral vascular disease (vessels outside the heart)

Thank you for your patience during our construction project. We are proudly investing in the health of our community. Please ask a friendly staff member for assistance during our construction project.

Thank you for choosing Community Hospital!
